

The Home Page

On your Office 365 homepage you have access to all the online versions of Office 365 tools. For example, you can open and edit a Word document.

The list of applications on your homepage is not the full list of apps, just the most commonly used ones. You can click “All apps” to see a full list of programs you can use with Office 365.

Navigating O365 Online

When you are working with the Online applications, you can easily jump from one program to another using the handy “waffle” button.
