► Here is how Carey showed fractions of the dark green rod.

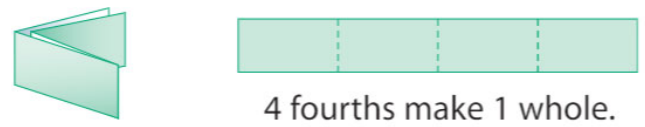

► You can fold a strip of paper to show fractions.

- Fold from end to end to show halves.

- Fold in half again to show fourths or quarters.

- Fold in half again to show eighths.

Carey knows the white rods are sixths because all of them are equal in length and there are 6 of them.

Once you fold the strip into equal parts, you can count the parts.
