## HOW SCIENTISTS CLASSIFY

In your textbook, read about how scientists classify today in Section 3:3. Then, examine the classification of the three animals in the chart below.

	Animal A	Animal B	Animal C
Kingdom	Animal	Animal	Animal
Phylum	Chordate	Chordate	Chordate
Class	Mammal	Aves	Aves
Order-	Primates	Passeriformes	Passeriformes
Family	Pöngidae	Fringillidae	Fringillidae
Genus	Pan	Spizella	Serinus
Species	troglodytes	passerina	canarius

1.	Comparing Animals A and B, how many groups are the same?
2.	Comparing Animals A and C, how many groups are the same?
3,	Comparing Animals B and C, how many groups are the same?
4.	Which two animals (A and B, A and C, or B and C) are most alike in classification?

- 5. Which two animals have more of the same traits?
- 6. Which two animals have more of the same body parts?
- 7. Which two animals are most closely related?
- 8. What is the scientific name of Animal A?
- 9. What does the first word of the scientific name represent?
- 10. What does the second word of the scientific name represent?
- 11. What are three reasons for using scientific names?

## Enrichment CHAPTER 3 Name Date\_ Class Use with Section 3:3. THE CLASSIFICATION OF ANIMALS Use this information and information from your textbook to complete the scientific names of the animals below and to fill in the chart. Shown below are pictures of animals with their common names and scientific names. Why do the scientific names of all the animals shown begin with the same word? The genus for dogs and doglike animals is Canis. Dogs belong to the family Canidae and to the same order as cats. Common name: coyote wolf dog Scientific name: Canis latrans Canis lupus Canis familiaris

Use after Section 3:3.

## **CLASSIFICATION OF LIVING THINGS**

Scientists use classification to arrange living things into groups. There are thousands of different kinds of living things. Classifying allows the scientist to see the "big picture". Grouping helps to identify living things and to compare them to each other. In the modern classification system, there are seven groups. The pictures below show eight living things. Some of them are very similar. Some are very different from each other. How can you classify them? Study the table below. To what kingdom do most of the living things shown belong? Read the names and descriptions on the table. Decide which living thing best fits each description. Now letter the living things A, B, C, D, E, F, or G to show which description best fits.

A	В	C	D '	E	F	G	Н
Animal	Animal	Animal	Plant	Animal	Animai	Animal	Animal
Chordata	Chordata	Arthropoda	Anthophyta	Chordata	Chordata	Chordata	Chordata
Mammalia	Reptilia	Insecta	Dicotyledones	Mammalia	Mammalia	Mammalia	Mammalia
Primates	Chelonia	Diptera	Fagales	Carnivora	Carnivora	Carnivora	Carnivora
Hominidae	Emydidae	Culicidae	Fagaceae	Felidae	Felidae	Felidae	Canidae
Ното	Terrapene	Theobaldia	Quercus	Felis	Fells	Panthera	Canis
sapiens	carolina	anulata	alba	domesticus	leo	pardus	lupus
