FACT FEUD "2"

LEVEL:	Grade 3 and up
SKILLS:	multiplication facts to 81
PLAYERS:	2
EQUIPMENT:	cards (Ace=1) - 9
GETTING STARTED:	Players decide (or the teacher directs) the particular fact to practice (ie. +7, +4, +8, etc.). Once the constant multiplier is determined, that card is placed between the two players. Players then divide the remaining cards evenly between themselves. Each player turns over one card and multiplies that card by the constant in the middle. The player with the highest product collects both cards. Players must verbalize their math sentence.

EXAMPLE:

Player 1		Player 2
4	x 5	7
"4 x 5 = 20"		"7 x 5 = 35"

Player 2 would collect both cards.

In the event of a tie (ie. both players have the same product), each player deals out three more cards face down and then turns another card face up. The turned over card is multiplied by the constant multiplier and the highest product wins all of the cards.

EXAMPLE:

Player 1		Player 2
8	x 5	8
"8 x 5 = 40"		"8 x 5 = 40"
–	(three cards	–
–	face down)	–
–		–
9		3
"9 x 5 = 45"		"3 x 5 = 15"

Player 1 would collect all of the cards.

Play continues until one player has collected all of the cards.
