## The Automatic Professor Teaches you about:

### 6.1 Types of Chemical Reactions

Instructions: Fill in the notes while you watch the video. Make headings, skip lines between topics, and underline headings. Use color to help your brain learn.

C4.4 I can identify, give evidence for, predict products of, and classify the flowing types of chemical reactions: synthesis (combination), decomposition, single and double replacement, neutralization (acid-base), combustion.

Classifying chemical reactions makes it easier to predict the products of reactions and recognize the new reactions. There are 6 common types of chemical reactions:

1. SYNTHESIS (COMBINATION) REACTION - $\qquad$ or more reactants ( $A$ and $B$ ) combine to produce a $\qquad$ product ( $A B$ ). (The letters $A$ and $B$ represent elements.)

| General Equation | $\mathrm{A}+\mathrm{B} \rightarrow \mathrm{AB}$ |
| :--- | :---: | :--- | :--- |
| Example Equation <br> (ionic) | $2 \mathrm{Na}+\mathrm{Cl}_{2} \rightarrow 2 \mathrm{NaCl}$ |
| Example Equation <br> (covalent) | $2 \mathrm{~N}_{2}+\mathrm{O}_{2} \rightarrow>2 \mathrm{~N}_{2} \mathrm{O}$ |

Try the Practice Problems on page 259.
2. DECOMPOSITION REACTIONS - The breaking down of a $\qquad$ into smaller compounds or $\qquad$ elements. Reverse of a synthesis reaction.

| General Equation | $\mathrm{AB} \rightarrow \mathrm{A}+\mathrm{B}$ |  |
| :--- | :---: | :--- | :--- |
| Example Equation | 2 NaCl | $\rightarrow 2 \mathrm{Na}+\mathrm{Cl}_{2}$ |
| Example Equation | 2 H 2 O | $\rightarrow 2 \mathrm{H}_{2}+\mathrm{O}_{2}$ |

Try the Practice Problems on page 260.
3. SINGLE REPLACEMENT REACTIONS - A reactive $\qquad$ (a metal or non-metal) and a
$\qquad$ react to produce another element and another compound. (One of the elements in the compound is $\qquad$ by another element.)

| General Equations | $A+B C \rightarrow B+A C$ ( $A$ is a metal) |
| :--- | :--- |
| $A+B C \rightarrow B A$ ( $A$ is a non-metal $)$ |  |

| Example Equation <br> (A is a metal) | $2 \mathrm{Al}+3 \mathrm{CuCl}_{2} \rightarrow 3 \mathrm{Cu}+2 \mathrm{AlCl}_{3}$ |
| :--- | :---: | :--- |
| Example Equation <br> $(A$ is a metal) $)$ | $\mathrm{Cu}+2 \mathrm{AgNO}_{3} \rightarrow 2 \mathrm{Ag}+\mathrm{Cu}\left(\mathrm{NO}_{3}\right)_{2}$ |
| Example Equation <br> $(A$ is a non-metal) | $\mathrm{F} 2+2 \mathrm{NaI} \rightarrow \mathrm{I}_{2}+2 \mathrm{NaF}$ |

Try the Practice Problems on page 261.
4. DOUBLE REPLACEMENT REACTIONS - Two ionic $\qquad$ react to produce two other ionic compounds. At least one of the compounds produces a $\qquad$ .

| General Equation | $A B_{(a q)}$ | $C D_{\text {(aq) }}$ | $\rightarrow$ | $A D_{(a q)}$ | + | $C B_{(s)}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Example Equation | $\mathrm{Pb}\left(\mathrm{NO}_{3}\right)_{2}$ | + 2 NaI | $\rightarrow$ | $2 \mathrm{NaNO}_{3}$ | + | $\mathrm{PbI}_{2}$ |
| Example Equation | 3 NaOH | $+\mathrm{FeCl}_{3}$ | $\rightarrow$ | 3 NaCl | + | $\mathrm{Fe}(\mathrm{OH})_{3}$ |

Try the Practice Problems on page 262.
5. NEUTRALIZATION REACTIONS - An acid and base combine and $\qquad$ each other. An acid and a base react to form a $\qquad$ and $\qquad$

| General Equation ( $X$ is a negative ion.) ( $M$ is $s$ a positive ion.) | $\begin{aligned} & \text { Acid } \\ & H X \end{aligned}$ |  | $\begin{aligned} & \text { Base } \\ & \mathrm{MOH} \end{aligned}$ | $\begin{aligned} & \vec{\rightarrow} \\ & \rightarrow \end{aligned}$ | $\begin{aligned} & \text { Salt } \\ & \text { MX } \end{aligned}$ |  | $\begin{aligned} & \text { Water } \\ & \mathrm{H}_{2} \mathrm{O} \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Example Equation | $\mathrm{H}_{2}\left(\mathrm{SO}_{4}\right)$ | + | $\mathrm{Ca}(\mathrm{OH})_{2}$ | $\rightarrow$ | $\mathrm{CaSO}_{4}$ |  | $2 \mathrm{H}_{2} \mathrm{O}$ |
| Example Equation | $3 \mathrm{H}_{3} \mathrm{PO}_{4}$ | + | $3 \mathrm{Fe}(\mathrm{OH})_{2}$ |  | $\mathrm{Fe}_{3}\left(\mathrm{PO}_{4}\right)_{2}$ | + | $6 \mathrm{H}_{2} \mathrm{O}$ |

Try the Practice Problems on page 263.
6. COMBUSTION REACTIONS - A $\qquad$ reaction of a compound or element react with to form an oxide and to produce heat.

| General Equation | Hydrocarbon <br> $C_{x} \mathrm{H}_{4}$ | + <br> + | oxygen <br> $\mathrm{O}_{2}$ | $\rightarrow$ <br> $\rightarrow$ | carbon dioxide <br> $\mathrm{CO}_{2}$ <br> + | + <br> $\mathrm{H}_{2} \mathrm{O}$ |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Example Equation | CH 4 | + | $2 \mathrm{O}_{2}$ | $\rightarrow$ | $\mathrm{CO}_{2}$ | + | $2 \mathrm{H}_{2} \mathrm{O}$ |
| Example Equation | $3 \mathrm{C}_{2} \mathrm{H}_{2}$ | + | $5 \mathrm{O}_{2}$ | $\rightarrow$ | $4 \mathrm{CO}_{2}$ | + | $2 \mathrm{H}_{2} \mathrm{O}$ |
| Example Equation | $\mathrm{C}_{6} \mathrm{H}_{12} \mathrm{O}_{6}$ | + | $6 \mathrm{O}_{2}$ | $\rightarrow$ | $6 \mathrm{CO}_{2}$ | + | $6 \mathrm{H}_{2} \mathrm{O}$ |

Try the Practice Problems on page 264. Then try the Summary Practice Problems p. 265.
