

Safety

1. Find the section in your textbook titled, "Safety in Your Science Classroom".
2. Read carefully.
3. Create the following pieces of evidence of your learning:
 - With a group of up to 4 people, use the large white boards to create a visual organizer to sort the safety guidelines.
 - REFLECT: In your coiled notebook, describe the 3 rules that you think are the most important and why you think so.
 - You will also be assigned a group and a general safety rule. Make a photo to show the rule being done INCORRECTLY. You will need to send your photo to Mrs. P at vpcentralbio1@gmail.com THE SAME DAY. It will become part of a slide show that will be your safety test. NO PHOTOS WILL BE UPLOADED TO THE INTERNET.
4. All of this is practice which you will need to present before you can write the summative test.
