

Weekly Home Learning Plan

Monday June 1st	Literacy	<p>Reading: Gather all your stuffed animals and make them sit in front of you and pretend you are the teacher. Read your favourite book with expression and ask good questions about the book after.</p> <p>Writing: Journal write about something you did this weekend and draw a picture to go along with it!</p>
	Numeracy	<p>Exploration day! Today we will explore weight, how heavy something is. The challenge today is to find object that weigh the same. No scale, no problem. Find two buckets, a rope and a tree branch. Place the rope over the tree branch and tie the buckets to the end of ropes. Make sure the buckets are even with each before beginning the task. Choose any two objects you think weigh the same and put one in one bucket and the other in the opposing bucket. If the buckets stay the same you found two matching weights! If your buckets shift, you found one lighter and one heavier. Try this experiment with various objects! Have fun!</p>
	Healthy Living/theme	<p>Read the questions on the below link. Have your student choose two questions they want to know the answer to and read them the section please.</p> <p>https://www.lpi.usra.edu/education/skytellers/stars/</p> <p>Think what stars look like in the night sky. If the stars are out before you go to bed, save this for a night time activity. Recreate a picture of the stars on paper. You can use any medium you want, paint, crayon, marker. Remember that stars mostly look like dots in the sky.</p>
Tuesday June 2nd	Literacy	<p>Reading: Read a book on Epic. When you see punctuation with a question or exclamation mark, read that sentence with expression.</p> <p>Writing: Write your mom's name and all her nicknames. Write a kind rhyming word for each name. Find something that is your mom's favourite colour and shape. What else is your mom's favourite colour? What else is your mom's favourite shape?</p>
	Numeracy	<p>Head out for a walk and find some natural plant beginning to grow. Measure the height (from ground to sky) with your hand. You will need to start at the ground, make sure your fingers are closed and you place a pinky of one hand to the thumb of the other. Record your findings! What happens to your recorded height if you open your fingers? Why do you think we start at the base? Why should we close our fingers?</p>
	Healthy Living/theme	<p>Listen to:</p> <p>https://www.lpi.usra.edu/education/skytellers/constellations/preview/</p> <p>Ask a parent to show you images of constellations using google search. Choose your favourite and recreate this constellation outside with rocks. Can you create more? Soon you'll have a whole night sky created!</p>
Wed	Literacy	<p>Reading: Find 6 objects in your house that have 1 syllable when you say them. Then find 6 other objects that have 2 syllables when you say</p>

June 3rd		<p>them. Remember you can always use your hands to clap to each syllable to check like how we do in class. 😊</p> <p>Writing: Draw a picture of your Dad's favourite meal! Label your drawing. When you're done, make a snack or a meal for your Dad.</p>
	Numeracy	<p>Today's lesson is all about capacity (the amount something can contain). Choose three various containers, make sure the sizes vary from very small to large. Fill your smallest container with water Then pour the water into the largest container. See how many small containers it takes to fill the large container. Predict how many you think it will take after seeing your first pour. Record your prediction and findings. Try the same with your second container. Why do you think the numbers vary? When the containers are full, go water the garden and any plants in the house.</p>
	Healthy Living/theme	<p>Think of positive qualities in your family and friends. Gather pictures of these people and create a totem pole of pictures. Tell a parent or sibling about your totem pole.</p>
Thursday June 4th	Literacy	<p>Reading: Choose a picture book and read the pictures. Reread the book with the words. Was the story close? If not, no worries you just created another story! Cool right?</p> <p>Writing: Create your favourite outfit for your mom to wear! Draw a picture to a perfect night out where she would wear this. Ask your mom what her favourite outfit is and why? Ask your mom her dream night out to wear this outfit. Have mom put on the outfit and recreate her dream night out at home!</p>
	Numeracy	<p>Today we are going to measure width (how long across). Grab a pair of your shoes and clean the bottoms. Have a sibling or a parent lie face down with their arms spread out. We are going to measure the width of their arm length. Start at the farther point of their arm (include fingers). Then place one shoe after the other until you reach, he farthest body part on the opposite arm. Who in your family do you think has the widest arm span? Measure each family member and find out!</p>
	Healthy Living/theme	<p>Read life cycle of a frog on Epic, then draw a picture and record your favourite thing you learned while you were reading the book?</p> <p>THINK OUTSIDE THE BOX</p> 

Friday June 5th	Literacy	<p>Reading: Look around your house and read five words in each room. Look high, look low, words are everywhere!</p> <p>Writing: Ask your mom to find something that she has had for a very long time. Listen to her story about the item and ask 3 follow up questions and 2 compliments to the item.</p>
	Numeracy	<p>Today we are going to investigate perimeter (distance around an object). Beginning at your front door, walk around your house heel touching the toes of the foot. And count how many feet the perimeter of your house is. Clean your mom's shoes and walk around with her shoes. Did the perimeter change when you changed shoes? Why do you think the number changed?</p>
	Healthy Living/theme	<p>Similar to what we did with life cycles for butterflies and plants, find materials in your house or from outside to re-create the life cycle of a frog. Don't forget to label you drawings like a scientist (Egg, tadpole, froglet, adult frog).</p>
